

Patient's Name: Miss. xxxxx

Dentist's Name: Dr. Shabahang Mohamadi

Age: 9 yo

Examination Type: CBCT – PNS Examination

Examination Date: 1393/08/05

Patient's ID: 3700

CBCT examination of the PNS was done with Promax 3D machine. Axial and coronal views with 1 mm slice interval are provided.

Findings:

- All Paranasal sinuses are clear and no mucosal thickening or other pathologic condition inside them is seen.
- OMC at both sides are open.
- No septal deviation is noted.
- Concha Bullosa associated to the left middle turbinate is obvious.
- Mucosal ling of the inferior turbinates seems to be hypertrophic.
- Frontal sinus is mostly extended to the left side of the frontal bone.

Sincerely

Dr. Alireza Ordoukhani
Oral & Maxillofacial Radiologist
